CALIFORNIA NOTICE AND CONSENT FORM FOR BLOOD OR OTHER BODILY FLUID TESTING WHICH MAY INCLUDE AIDS VIRUS (HIV) ANTIBODY/ANTIGEN TESTING

To determine your insurability, the insurer named above ("the insurer") has requested that you provide a sample of your blood or other bodily fluid for testing and analysis. All tests will be performed by a licensed laboratory.

Tests may be performed to determine the presence of antibodies or antigens to the Human Immunodeficiency Virus (HIV), also known as the AIDS virus. The HIV antibody test is actually a series of tests done by a medically accepted procedure. The HIV antigen test directly identifies AIDS viral particles. These tests are extremely reliable. Other tests which may be performed include determinations of blood cholesterol and related lipids (fats) and screening for liver kidney disorders, diabetes, and immune disorders.

All test results will be treated confidentially. They will be reported by the laboratory to the insurer. When necessary for business reasons in connection with insurance you have or have applied for with the insurer, the insurer may disclose test results to others involved in the underwriting and claims review process. If the HIV test is positive the results will be reported to the Medical Information Bureau (MIB, Inc.), a generic code which signifies only non-specific blood or other bodily fluid test abnormalities. If your HIV test is normal, no report will be made about it to the MIB, Inc. Other test results may be reported to the MIB, Inc. in more specific manner. The organizations described in this paragraph may maintain the test results in a file or data bank. There will be no other disclosure of test results or even that the tests have been done except as may be required or permitted by law or as authorized by you.

If your HIV test results are normal, no routine notification will be sent to you. If the HIV test results are other than normal, the insurer or your designated physician will contact you. The insurer may also contact you if there are other abnormal test results which, in the insurer's opinion, are significant. The insurer may ask you for the name of a physician to whom you may authorize disclosure and with whom you may wish to discuss the results.

Positive HIV antibody/antigen test results do not mean that you have AIDS, but you are at significantly increased risk of developing AIDS or AIDS-related conditions. Federal medical authorities have concluded that persons who are HIV antibody/antigen positive should be considered infected with the AIDS virus and capable of infecting others.

Positive HIV antibody or antigen test results or other significant blood abnormalities will adversely affect your application for insurance. This means that your application may be declined, that an increased premium may be charged, or that other policy changes may be necessary.

I have read and I understand this HIV Notice and Consent form. I have also received a list of AIDS counseling centers from the insurer. I voluntarily consent to the withdrawal of blood or other bodily fluids from me, the testing of that blood or other bodily fluids, and the disclosure of the test results as described above.

In the event of an HIV test result that is other than normal, I authorize the insurer to send the test results to the following health care professional for post-test counseling.
